

The Accounting Chamber
Supreme Audit Institution of Ukraine

Implementation of recommendations based on the results of international audits in the field of waste management – the experience of Ukraine

Liliia Prudyvus
the Accounting Chamber of Ukraine

International audits play an extremely important role

International coordinated audits in the field of waste management

These audits are instrumental in :

determine the best practices

compliance with international standards and regulations

identified deficiencies in national legislation

identification of more effective waste management systems

Focus on specific international coordinated audits

Transboundary movements of wastes in the light of the Basel Convention provisions

International Audit on Waste Management and Utilization

Transboundary movements of wastes in the light of the Basel Convention provisions

The objective of the audit was to determine the facts and to assess the scope of compliance with the provisions of the “Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal” between Ukraine, the Slovak Republic and the Republic of Poland as well as to assess the state of implementation of recommendations

BASEL CONVENTION

As a result of the audit, participants recommended

improvements to the system for controlling transboundary waste transport between Ukraine, Slovakia, and Poland.

Specifically, they suggested making necessary amendments to national legislation

Our monitoring has shown

Several
recommendations
were taken into
account in Ukraine
when the Law of Ukraine
"On Waste Management"
was adopted in 2022

Amendments to the Law of Ukraine "On Licensing Types of Economic Activity"

Determination of the List of Properties Making Waste Hazardous

Amendments to the Law of Ukraine "On Environmental Impact Assessment"

Establishment of Liability for Violations in Waste Management

International Audit on Waste Management and Utilization

The audit was aimed at assessment of the status and effectiveness of waste management systems in the countries of audit participants

It was recommended by the participants

The Governments should to intensify efforts for transition from a linear economy to a circular, based on maximum waste recycling, and creation of an integrated waste management system according to the existing waste management hierarchy in the EU

Our monitoring has shown

93%

5.6%

1,4%

The Law of Ukraine "On Waste Management"

launches **waste management reform** in Ukraine and implements EU standards to Ukrainian legislation

Regulation of relations concerning a waste management, including collection, transportation, processing, utilization, and disposal of waste

Establishment of legal, organizational, and economic principles for activities to prevent waste generation, reduce waste, reuse, recycling, and disposal

With the launch of waste management reforms, the situation in our country was expected to change dramatically

Russia's military aggression against Ukraine has significantly complicated the situation

Demolition waste carries catastrophic consequences for the environment

More than
950,000 tons
of demolition waste
have already
accumulated in
Ukraine, and this
figure is increasing
daily

It contains many hazardous substances, including a significant amount of asbestos-containing materials

Over 70% of the roofs of residential and public buildings in Ukraine are still covered with corrugated asbestos-cement sheets, which are composed of 10-15% chrysotile asbestos

War wastes

Unexploded ordnance and debris from it, burned vehicles and military equipment, used disposable NLAW systems, batteries, etc.

The state of Government efforts in waste management and environmental safety directly affects people's health and environmental sustainability

A flexible
and
innovative
response is
necessary

Our task as the SAI is to **assist our Governments** in increasing the effectiveness of implementing their relevant strategies

Military actions have led to a massive amount of demolition waste containing hazardous substances

Many countries focus on the reuse and recycling of construction waste.

88% of construction waste was recycled in the European Union in 2018

Currently, the Pilot Projects are already being implemented by international partners in Ukraine

has provided equipment for shredding and separating construction waste in the Kyiv region

Monitoring and audits of the implementation of recommendations of International Coordinated Waste Management Audits are critically important for preventing environmental disasters and preserving people's health

**Together, we can
achieve more,
ensuring
sustainable
development
and a **safe
future for
next
generations****

**Thank you for
attention!**
